

CHAPTER 1

INTRODUCTION

This chapter presents the background, statement of the problem, and the purpose of the study, setting the direction for the research.

1.1 Background and rationale

Conflicts within communities are a normal aspect of everyday social life. In barangays, residents live close together, share public spaces, and interact regularly. These conditions make disputes over family matters, property boundaries, noise disturbances, and interpersonal disagreements more likely. If such conflicts are left unresolved, they can strain relationships, disrupt peace, and escalate into serious problems that affect the larger community.

To address these issues at the grassroots level, the Government of the Philippines institutionalized a localized conflict resolution system known as the Katarungang Pambarangay (KP) or Barangay Justice System. This system is established under the Local Government Code (Republic Act No. 7160) and is designed to provide accessible, informal, and community-based dispute resolution through mediation, conciliation, and arbitration. The KP aims to settle disputes within the barangay before they enter the formal judiciary, reducing court congestion and offering a more affordable and culturally appropriate avenue for justice. The Department of the Interior and Local Government (DILG) and its Local

Government Academy provide oversight, training, and support to ensure barangays implement the Katarungang Pambarangay procedures effectively (DILG, 2024; Local Government Code, 1991).

The KP process is led by the Punong Barangay (Barangay Captain) and the Lupong Tagapamayapa (peacekeeping committee). These officials facilitate amicable settlements, record conflict cases, and document outcomes. Proper documentation is essential: it allows barangay officials to track dispute patterns, evaluate the efficiency of settlement processes, and maintain transparency and accountability. Without systematic record-keeping, it is difficult to assess whether disputes are being resolved fairly and whether recurring issues need targeted interventions.

One major program that highlights best practices in conflict resolution and documentation is the Lupong Tagapamayapa Incentives Awards (LTIA)—an annual recognition system instituted by the DILG. Established in 1997 and mandated under the Local Government Code, the LTIA rewards Lupons that demonstrate exemplary implementation of the Katarungang Pambarangay system, including case settlement, efficiency of operations, and proper documentation practices (DILG, Region XII, 2023; DILG Region IV-A, 2025).

In addition, DILG reports and awards data indicate that barangays with wellorganized records and consistent application of Katarungang Pambarangay

procedures tend to perform better in dispute resolution and contribute to peace and order in their communities. For example, annual LTIA evaluations assess criteria such as efficiency in operations, effectiveness in attaining Katarungang Pambarangay objectives, and systematic documentation of cases, which underscores the importance of reliable administrative practices in community justice systems (DILG Region XII, 2025).

Despite these institutional efforts, barangays still vary widely in their capacity to implement Katarungang Pambarangay procedures. Some have structured logs of complaints and documented settlement agreements, while others struggle with administrative workload, lack of training, or insufficient documentation practices. These variations affect not only how quickly disputes are resolved but also how residents perceive the fairness and credibility of the barangay justice system.

In the context of the Barangays of Libertad, studying the types of conflicts documented, the frequency with which they occur, and how they are resolved under the Katarungang Pambarangay system provides a clearer picture of how well community-based dispute resolution operates at the ground level. This analysis helps determine whether the Katarungang Pambarangay procedures are effectively administered and whether they align with national guidelines for mediation and conciliation.

Furthermore, understanding documented conflict cases also contributes to evaluating local governance performance. It highlights strong practices that should be sustained and reveals areas that may need targeted improvements—whether in training barangay officials, enhancing documentation systems, or improving community engagement and awareness of Katarungang Pambarangay processes. By focusing on these areas, barangay officials can strengthen their conflict resolution strategies and promote peace and harmony among residents.

Overall, examining documented conflict cases in the Barangays of Libertad offers valuable insights into the daily realities of local dispute management and the functioning of the barangay justice system. It supports evidence-based recommendations on how the Katarungang Pambarangay system can continue to be an effective mechanism for community conflict resolution in the Philippines.

1.2 Statement of the problem

This study aims to describe the documented conflict cases in the Barangays of Libertad. Specifically, it seeks to answer the following questions:

1. What types of conflict cases are commonly documented in Barangays Dulong, Gimaylan, Lubluban, Poblacion, and Taytayan?
2. How frequent are these conflict cases within the given period?
3. What resolution procedures are used by the barangay in handling these cases?
4. How effective are these procedures based on the recorded outcomes?

1.3 Objectives of the study

1.3.1 General objective

To examine the documented conflict cases in five (5) selected Barangays of Libertad, sepcifically, Dulong, Gimaylan, Lubluban, Poblacion, and Taytayan by identifying the types of disputes reported, determining how often they occur, and assessing the procedures used in resolving them under the Katarungang Pambarangay system.

1.3.2 Specific objectives

1. To identify and list the types of conflict cases documented in Barangays Dulong, Gimaylan, Lubluban, Poblacion, and Taytayan.
2. To determine how often these conflict cases occurred within the given period.
3. To describe the procedures barangays use to resolve these conflicts.
4. To assess the effectiveness of these procedures based on recorded outcomes.

1.4 Scope and limitations of the study

This study focuses only on documented conflict cases in five (5) selected Barangays of Libertad, Misamis Oriental (Dulong, Gimaylan, Lubluban, Poblacion, and Taytayan). The data will rely on existing barangay records and information obtained during our immersion under the DILG office.

The study does not include:

- Unreported or informal conflicts,
- Conflicts handled by agencies outside the barangay,
- Personal interviews with involved parties (I/A)
- Court-filed cases.

1.5 Significance of the study

The findings will benefit the following:

School. Schools can use the results to enhance lessons related to governance, social science, and community engagement. The study may also guide school programs on peace education and conflict management.

Students. Students gain practical knowledge about how local dispute-resolution systems work in real-life community settings. The findings can be used as a reference for research, community immersion, or civic-related projects.

Teachers. Teachers can integrate the results into classroom discussions, especially in subjects like Social Studies, Civic Education, and Practical Research.

Municipality. Local government offices can use the findings to assess how well barangays implement the Katarungang Pambarangay system. The results may support policy improvements, training programs, and initiatives aimed at strengthening peace and order.

Researchers and Academics. Future researchers may use the study as a reference for exploring local governance, conflict resolution, and community development. It also adds to the growing literature on barangay-level justice systems.

Peace and Order Councils. Municipal and barangay peace and order councils can use the data to identify recurring issues, create targeted interventions, and support conflict-prevention strategies.

Overall, this study is significant because it helps different sectors understand how documented conflicts reflect community realities—and how improving resolution procedures can lead to a more peaceful and organized local environment.

1.6 Definition of terms

The following terms were used all throughout the study and were defined for clarity and better understanding:

Arbitration. A formal dispute resolution process where the Punong Barangay or a chosen Lupon member makes a binding decision on the case when both parties agree to submit the dispute to arbitration.

Barangay Justice System (Katarungang Pambarangay). A community-based mechanism mandated by the Local Government Code that allows barangays to settle disputes through mediation, conciliation, or arbitration before cases reach the formal courts. It is handled by the Punong Barangay and the Lupon Tagapamayapa.

Conciliation. A barangay-level procedure in which a Lupon member facilitates discussion between parties to help them reach a settlement when mediation is unsuccessful.

Conflict Case. A documented complaint or dispute filed by residents in the barangay, involving issues such as family disagreements, property concerns, neighborhood disturbances, or other interpersonal conflicts.

Documentation. The process of recording conflict cases, mediation sessions, agreements, and outcomes in the barangay's official records, including blotters, minutes, and settlement forms.

Lupon Tagapamayapa. A group of community members appointed by the Punong Barangay to assist in mediating and settling disputes. They conduct conciliation proceedings and help maintain peace within the community.

Mediation. A resolution process where the Punong Barangay or an authorized Lupon member helps disputing parties talk through their concerns and find a voluntary agreement.

Punong Barangay. The elected head of the barangay who serves as the primary mediator of disputes and oversees the whole Katarungang Pambarangay process.

Settlement. A mutually agreed-upon resolution between disputing parties, documented and signed at the barangay level, indicating that the issue has been resolved.

Types of Conflicts. Categories used to classify documented disputes, such as family-related issues, property boundary problems, noise or disturbance complaints, and other interpersonal disagreements.

CHAPTER 2

REVIEW OF RELATED LITERATURE

This chapter presents the body of local and foreign literature that supports and informs the present study. It discusses published works that examine the implementation of the katarungang pambarangay system, the handling of community-level disputes, and the role of grassroots justice mechanisms in maintaining social order.

Local research on the Katarungang Pambarangay and community-level conflict resolution in the Philippines provides a substantial foundation for understanding how disputes are managed within barangays. These studies explore the experiences of barangay officials, the participation of residents, the effectiveness of mediation processes, and the challenges that arise in implementing the Barangay Justice System. By examining these works, the study gains insight into the practical realities of conflict handling at the grassroots level, as well as the recurring administrative, procedural, and cultural issues that shape the outcomes of local dispute resolution.

Studies on the Katarungang Pambarangay (KP) consistently highlight both its usefulness and the gaps that appear in day-to-day implementation. In Quezon City, one study documented how barangay mediation remains the first stop for residents experiencing domestic or neighborhood conflict. The researchers found that while KP is perceived as effective, the process often suffers from low

attendance of disputing parties and inconsistent case follow-up (Bestlink College Researchers, 2024). This mirrors patterns seen in many urban barangays where caseloads are high and documentation practices vary widely.

A similar evaluation in Tarlac emphasized the grassroots peace-building role of the KP system. Almazan (2025) explained that residents value the barangays' capacity to settle disputes informally, especially those involving families or neighbors, which are culturally sensitive. However, limited training among Lupon members and lack of resources continue to weaken procedural consistency. His findings support the need for continuous capacity building at the barangay level.

Furthermore, in Ilocos Sur, Cerna (2023) assessed KP implementation and highlighted that while most barangay officials know the legal framework of the system, many have not undergone formal mediator training. This results in variations in how mediation or conciliation is performed, affecting fairness and efficiency. Her study suggested that improving mediator competence could significantly raise settlement success rates.

However, documentation issues also surfaced in Northern Luzon. Damayon et al. (2022) found notable inconsistencies across barangays regarding recordkeeping, case logging, and issuance of settlement forms. These gaps make it difficult to track repeat offenders, recurring conflicts, and compliance with settlements. Despite these weaknesses, community trust in barangay mediation

remained high, showing the importance of KP as the primary conflict-resolution venue in local governance.

In addition, the internal work experiences of Lupon Tagapamayapa members were explored by Verdad (2024), who reported that mediators face emotional burdens, role ambiguity, and minimal institutional incentives. According to the study, Lupon members often mediate conflicts involving their own neighbors or relatives, which intensifies stress and complicates decision-making. Verdad highlighted the need for psychological support and structured workloads.

A study by Silliman University researchers strengthened this point, noting that barangay officials responsible for KP are often overwhelmed due to the simultaneous administrative tasks they handle (Tiu & Malayang, 2018). The researchers observed that high caseloads and lack of formal training constrain officials from fully applying the step-by-step KP procedures, leading to delays or informal shortcuts.

Lastly, Gonzales (2022) studied the implementation of the Barangay Justice System in Calauan, Laguna, and its effect on community satisfaction. The study found that while the system offers an accessible alternative to formal courts, issues like delays, inconsistent procedures, and limited awareness reduced satisfaction. The research highlights the need for intervention programs to improve both the efficiency of barangay justice and residents' understanding of their rights, providing

a useful reference for studies on compliance with Katarungang Pambarangay procedures.

Overall, the local studies consistently show that while the Katarungang Pambarangay system remains an essential mechanism for resolving disputes at the grassroots level, its effectiveness varies significantly across communities. Factors such as mediator training, administrative support, documentation practices, and residents' awareness strongly influence how cases are handled.

These findings highlight persistent gaps in the barangay justice system and emphasize the importance of examining how specific communities—such as the barangays of Libertad—document conflicts, manage case frequency, and follow proper resolution procedures.

The recurring issues identified in local literature reinforce the need for a focused analysis of how KP functions on the ground and where improvements can be made

International literature on community-based and informal justice systems offers valuable comparative perspectives that help frame the Philippine experience within a broader global context. Research from other countries highlights how culturally grounded mediation, village-level conflict mechanisms, and alternative dispute-resolution structures operate outside formal courts. These studies provide

useful benchmarks for understanding the strengths and limitations of grassroots justice models, allowing the present study to situate the Katarungang Pambarangay within wider discussions on community governance and conflict management.

In addition, comparative research in Southeast Asia shows similar strengths and challenges among community-based justice systems. In Thailand and Indonesia, for example, village-level mediation structures handle disputes using culturally embedded processes. Glubwila et al. (2021) found that these systems work best when mediators are trained and supported by local institutions, mirroring the Philippine experience under KP. Their cross-country analysis emphasized the need for consistent documentation and procedural clarity.

Furthermore, in Indonesia, Haq et al. (2023) examined how community mediation helped resolve pandemic-related conflicts, especially in vulnerable rural areas. The authors explained that mediation provided fast, low-cost conflict relief when formal courts were inaccessible. They also noted that community trust is a decisive factor—reinforcing the idea that dispute-resolution systems rooted in local culture, like KP, are often more effective at maintaining social stability.

As Sainul et al. (2024) studied traditional non-litigation mechanisms, particularly in handling family disputes through customary mediation, findings revealed that incorporating cultural norms into conflict resolution promotes

compliance and strengthens community cohesion. This parallels the KP's emphasis on amicable settlement, suggesting that culturally grounded mediation remains a powerful tool for community peace-building across Asia.

Overall, the foreign literatures further strengthen the understanding that community-based justice systems share common strengths and challenges across different countries. Successful implementation depends on cultural alignment, trust in local mediators, institutional support, and consistent documentation—factors echoed in the Philippine experience. These international insights support the relevance of analyzing the KP's actual practice in Libertad, showing that grassroots conflict resolution is most effective when structured procedures, trained mediators, and community engagement work together. The parallels found in other nations confirm that enhancing local justice mechanisms is a global priority, and they provide valuable benchmarks for evaluating and improving barangay-level conflict resolution.

CHAPTER 3

THEORETICAL AND CONCEPTUAL FRAMEWORK

This chapter presents the theoretical and conceptual framework that guides the study. It discusses the theories underpinning the research and illustrates the relationships among the key variables.

3.1 Theoretical framework of the study

This study is guided by Conflict Theory by Karl Marx (1848) and Alternative Dispute Resolution (ADR) Theory by Frank E.A. Sander (1976). Conflict Theory explains that conflict is a normal part of community life. In barangays, people interact closely, which can lead to misunderstandings and disputes involving family matters, property issues, and neighborhood concerns.

These conflicts arise from differences in interests, behavior, and expectations among residents. If not properly addressed, such conflicts may disturb peace and order in the community.

To manage these conflicts, the study is also anchored on Alternative Dispute Resolution (ADR) Theory. ADR focuses on resolving disputes outside the formal court system through peaceful methods such as mediation, conciliation, and arbitration. This theory emphasizes cooperation, dialogue, and mutual agreement rather than punishment.

In the Philippine setting, ADR principles are applied through the Katarungang Pambarangay System under Republic Act No. 7160. Barangay officials, particularly the Punong Barangay and the Lupon Tagapamayapa, handle conflicts at the community level and document their resolution. Guided by these theories, the study examines documented conflict cases to understand how disputes arise and how they are resolved in the barangays of Libertad.

3.2 Conceptual framework of the study

The study follows an Input–Process–Output (IPO) Model, which is appropriate for descriptive research. This framework illustrates how documented conflict cases are handled through barangay justice procedures and how these lead to specific outcomes.

Figure 1. Conceptual Framework of the study

CHAPTER 4

RESEARCH METHODOLOGY

This section presents the research methodology employed in the study. It describes the research design, participants, instruments, data collection procedures, and methods of data analysis.

4.1 Research design

This study utilized a descriptive research design. Descriptive research is appropriate because the study aims to describe existing conditions rather than manipulate variables. Specifically, it focused on identifying the types of documented conflict cases, their frequency, and the resolution procedures applied by the barangays under the Katarungang Pambarangay system.

The design allowed the researchers to systematically examine barangay records and official documents to present a clear picture of how conflicts are handled and documented in the selected barangays of Libertad. No experimental treatment or intervention was applied, as the study relied solely on existing data and records.

4.2 Subject of the study

The subjects of the study consisted of barangay officials and records custodians directly involved in the Katarungang Pambarangay process. These included the Punong Barangay, selected members of the Lupon Tagapamayapa, and barangay secretaries from the five (5) selected barangays of Libertad, namely Dulong, Gimaylan, Lubluban, Poblacion, and Taytayan.

The respondents were chosen because they are responsible for handling, recording, and maintaining conflict case documents. Their role provided access to reliable and official information relevant to the objectives of the study.

4.3 Sampling procedure

The study employed purposive sampling. This sampling method was used because only specific barangays and individuals were relevant to the research objectives. The five (5) barangays were selected based on accessibility, availability of documented conflict records, and relevance to the researchers' immersion under the Department of the Interior and Local Government (DILG).

Within each barangay, respondents were selected based on their involvement in the Katarungang Pambarangay process. This ensured that the data gathered were accurate and directly related to conflict documentation and resolution practices.

4.4 Instrument used in the study

The primary research instrument used in the study was a document analysis checklist. This checklist was developed by the researchers based on the objectives of the study and the standard procedures of the Katarungang Pambarangay system. It served as a guide in systematically reviewing barangay records and ensured that the same set of information was gathered across all selected barangays. The use of this instrument helped maintain consistency, accuracy, and objectivity in data collection.

The checklist included the following components:

1. Type of conflict case
2. Date and frequency of occurrence
3. Parties involved
4. Resolution procedure applied (mediation, conciliation, or arbitration)
5. Outcome of the case (settled, unresolved, or referred)
6. Completeness of documentation

The checklist helped ensure consistency and organization in reviewing barangay records.

4.5 Data-gathering procedure

Permission to conduct the study was first secured from the appropriate barangay offices and through coordination with the Department of the Interior and Local Government (DILG) Office of Libertad, Misamis Oriental, during the researchers' immersion.

After approval, the researchers reviewed available barangay records, including blotter books, mediation logs, and settlement documents. Information relevant to the study was recorded using the document analysis checklist.

No personal interviews with disputing parties were conducted, in accordance with the scope and limitations of the study.

All collected data were treated with confidentiality and were used strictly for academic purposes.

Figure 2. Map and location of Libertad, Misamis Oriental, Mindanao, Philippines

Figure 3. Flowchart of the research process

4.6 Data analysis

The data gathered were organized, classified, and summarized according to the objectives of the study. Conflict cases were grouped based on their type, frequency, and resolution procedure.

Descriptive analysis was used to explain patterns observed in the data, such as commonly reported conflicts and frequently used resolution methods. The analysis focused on presenting factual and straightforward interpretations without drawing conclusions beyond the recorded information.

The study applied basic quantitative measures to summarize and analyze the documented conflict cases. The following mathematical formulas were used:

1. Frequency (f)

The frequency of each type of conflict was determined by counting the number of times a specific case appeared in the barangay records.

$$f = \sum x$$

f = total number of occurrences of a specific type of conflict

$\sum x$ = sum of recorded cases under a particular category

2. Percentage (%)

To determine the proportion of each type of conflict or resolution procedure relative to the total number of documented cases, the percentage formula was used:

$$P = \frac{f}{N} \times 100$$

P = percentage of a specific category

f = frequency of a specific type of conflict or resolution

N = total number of documented conflict cases

100 = constant value to convert the result into percent

CHAPTER 5

RESULTS AND DISCUSSION

This chapter presents the results and discussion of the analyzed conflict cases documented in the selected barangays of Libertad.

5.1 Types of conflict cases that are commonly documented in Barangays Dulong, Gimaylan, Lubluban, Poblacion, and Taytayan, Libertad, Misamis Oriental.

The graph below presents the aggregated types of conflict cases recorded in the five selected barangays of Libertad for the year 2025. A total of 81 documented cases were analyzed.

Figure 4. Types of conflict cases and its frequency

This aligns with the study conducted by Cerna (2023), which states that property and monetary disputes are prevalent in barangay conflict records, often reflecting economic frustrations and interpersonal tensions within communities.

5.2 How frequent are these conflict cases within the given period?

A total of 81 documented cases were recorded across five barangays. Poblacion had the highest number of cases (24), followed by Dulong (22), Gimaylan (18), Lubluban (10), and Taytayan (7).

Figure 5. Conflict cases recorded per Barangay

This indicates that barangays with larger population centers tend to have more documented disputes. These frequency trends help pinpoint which barangays and conflict categories may need additional resources or proactive measures to reduce recurrence.

5.3 What resolution procedures are used by the barangays in handling these cases?

Mediation was the dominant resolution method (76%), reflecting strong adherence to the Katarungang Pambarangay system and ADR principles that emphasize community-based, non-adversarial settlements. Conciliation accounted for 20% of cases, while arbitration (1%) and court referrals (3%) were minimal, indicating a clear preference for resolving disputes at the barangay level.

Figure 6. Resolution Procedures

The frequent use of mediation as the primary resolution procedure was also evident in the records, with most conflicts being settled through this method. This finding supports the study of Verdad (2024), who emphasized that mediation is the most effective and culturally appropriate method for resolving disputes in barangays.

5.4 How effective are the resolution procedures based on the recorded outcomes?

The graph below presents the effectiveness rating of the Katarungang Pambarangay procedures across the five selected barangays of Libertad for the year 2025. Effectiveness was measured based on recorded settlement outcomes. The computed overall weighted mean is 8.57 out of 10. This indicates that the barangay justice system is generally effective in resolving documented conflict cases.

Figure 7. Effectiveness of Katarungang Pambarangay Procedures

The high success rate, with about 8 out of 10 cases resolved satisfactorily, demonstrates that when properly conducted, mediation can serve as a reliable mechanism for maintaining peace and order, as also supported by Gonzales (2020), who noted that community awareness and participation significantly influence the effectiveness of barangay dispute resolution.

The overall effectiveness of the system, rated at 8 out of 10 based on the records, suggests that the barangay justice system is functioning reasonably well but still has room for improvement.

This is supported by the literature of Tiu and Malayang (2018), who emphasized that high caseloads and lack of formal training among barangay mediators can compromise the quality of dispute resolution.

To address these issues, continuous seminars and training programs for barangay officials and mediators are recommended, as suggested by the study of Gonzales (2020), to enhance their skills and ensure procedural consistency.

CHAPTER 6

SUMMARY, CONCLUSION, IMPLICATIONS, AND RECOMMENDATIONS

This chapter presents the summary of the findings, conclusion, and the implication of the study as well as the recommendations.

1. This study examined the documented conflict cases in five selected barangays of Libertad, Misamis Oriental, namely Dulong, Gimaylan, Lubluban, Poblacion, and Taytayan.
2. The purpose of the study was to identify the types of conflicts recorded in the barangays, determine how frequent these conflicts occur, describe the procedures used to resolve them, and assess how effective these procedures are under the Katarungang Pambarangay system.
3. The study used a descriptive research design and relied on existing barangay records such as blotter books, mediation logs, and settlement documents. A document analysis checklist was used to systematically review the records. The data were then organized and analyzed using frequency and percentage.
4. The findings of the study showed that a total of 81 documented conflict cases were recorded across the five barangays in the year 2025. Among the different types of conflicts, collection of sum of money was the most

common case, followed by damage to property, threats, theft, physical injury, and other related disputes.

5. In terms of frequency, Barangay Poblacion recorded the highest number of cases, followed by Dulong, Gimaylan, Lubluban, and Taytayan. This suggests that barangays with larger populations tend to experience more documented conflicts.
6. Regarding resolution procedures, mediation was the most commonly used method, accounting for 76% of the cases. Conciliation was used in 20% of the cases, while arbitration (1%) and referral to court (3%) were rarely used. This indicates that most disputes are resolved directly at the barangay level through peaceful dialogue.
7. The effectiveness of the dispute resolution procedures was measured through recorded settlement outcomes. The overall effectiveness rating was 8.57 out of 10, which shows that the Katarungang Pambarangay system in the selected barangays is generally effective in resolving community disputes.
8. Based on the findings of the study, it can be concluded that the Katarungang Pambarangay system plays an important role in resolving community conflicts in the barangays of Libertad.

9. Most of the disputes recorded in the barangays involve financial disagreements and property-related issues, which are common problems among community members. The number of cases also varies among barangays, with more populated areas experiencing more reported conflicts.
10. The study also shows that mediation is the most preferred and effective method of resolving disputes. Through mediation, parties are given the opportunity to discuss their issues and reach a peaceful agreement without going to court. This supports the purpose of the Katarungang Pambarangay system, which is to resolve disputes quickly, peacefully, and within the community.
11. The study shows that barangay-level mediation remains an effective tool for maintaining peace and order in the community. This means that strengthening the capacity of barangay officials can further improve conflict resolution in local areas.
12. The results highlight the importance of proper documentation of conflict cases. Accurate records allow barangays and local government offices to track common disputes, monitor case outcomes, and evaluate how effective the Katarungang Pambarangay system is.

13. The study suggests that community awareness plays an important role in successful dispute resolution. When residents understand the processes of the barangay justice system, they are more likely to participate in mediation and comply with settlement agreements.
14. The study provides useful information that may guide future improvements in barangay governance, training programs for mediators, and community peace initiatives.
15. Regular training for barangay officials and Lupon Tagapamayapa members should be conducted to strengthen their mediation and conflict-resolution skills.
16. Barangays should improve their documentation and record-keeping practices to ensure that conflict cases are properly recorded and monitored.
17. The local government and the Department of the Interior and Local Government (DILG) may conduct seminars or awareness programs to help community members better understand the Katarungang Pambarangay system.

18. Barangays should encourage early reporting and mediation of disputes so that conflicts can be resolved before they escalate into more serious problems.
19. Future researchers may conduct further studies involving more barangays or additional data sources, such as interviews or community surveys, to gain a deeper understanding of conflict resolution practices at the local level.

DOCUMENTATION OF THE STUDY

January 28, 2026

Day 1, obtained record from Records custodians

February 12, 2026

Day 2, obtained records from Records custodians

February 20, 2025

Organized and Interpreted the Data collected

March 11, 2026

Discussed the findings with the Municipal Local Government Operations Officer (MLGOO) of Libertad Misamis Oriental

LETTER OF COORDINATION

Subject: Preparation of Required Documents for the Conduct of Research on Documented Conflict Cases under the Katarungang Pambarangay.

Greetings of peace,

In line with the approved research entitled “**DOCUMENTED CONFLICT CASES AND RESOLUTION PROCEDURES IN SELECTED BARANGAYS OF LIBERTAD, MISAMIS ORIENTAL**”, the Researchers from Libertad National High School respectfully informs your barangay that your participation has been selected for the conduct of said study.

The research focuses on documented conflict cases handled under the Katarungang Pambarangay (KP) system, specifically examining the types of conflicts, frequency of cases, resolution procedures, outcomes, and completeness of documentation. The study will rely strictly on existing barangay records and will be conducted in coordination with the Department of the Interior and Local Government (DILG) Office of Libertad.

The research is **legally and academically authorized** as part of the senior high school academic subject **Inquiries, Investigation, and Immersion (I.I.I.)**. The conduct of this study is in fulfillment of curriculum requirements and has been formally reviewed and approved by the Research Instructor, Mrs. Gladen Shelley Billones, and the School Principal, Mrs. Analiza N. Chu. The research follows approved academic protocols, adheres to ethical standards, and is conducted strictly for educational and research purposes.

To ensure an orderly, accurate, and complete data-gathering process, your barangay is respectfully requested to prepare and make available the following documents for review during the scheduled research activity:

Letter of Coordination – Page 2

A. Katarungang Pambarangay Records

1. Barangay Blotter Book

- ☐ Containing all recorded conflict cases within the covered period
- ☐ Entries must include dates, parties involved, nature of the complaint, and actions taken

2. Katarungang Pambarangay Case Log / Mediation Logbook

- ☐ Record of cases handled under KP
- ☐ Indicating whether the case underwent mediation, conciliation, or arbitration

B. Settlement and Resolution Documents

3. Written Settlement Agreements

- ☐ Signed by concerned parties and barangay officials ☐ Including date of settlement and agreed terms

4. Certificates to File Action (CFA)

- ☐ Issued for cases that were not settled at the barangay level

5. Records of Unresolved, Withdrawn, or Referred Cases

- ☐ Clearly indicating the final status of each case

C. Lupon Tagapamayapa and Administrative Documents

6. List of Current Lupon Tagapamayapa Members

- ☐ Including names and positions

7. Appointment Papers or Designation of Lupon Members (if available)

8. KP-Related Forms Used by the Barangay

- ☐ Standard forms used in mediation, conciliation, or arbitration

Letter of Coordination – Page 3

Please ensure that all documents are complete, organized, and accessible on **January 25, 2026**, the date when the data-gathering will be conducted.

This letter is served to:

1. Baranggay Dulong
2. Barangay Lubluban
3. Baranggay Poblacion
4. Baranggay Taytayan

Your cooperation is vital in ensuring the accuracy and credibility of this research, which aims to contribute to the improvement of barangay-level conflict resolution and local governance.

Prepared by:

ALEXTHON P. MACARIOLA

Research Leader, I.I.I.
